**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 28-33, 35, 37-42, 44, 46-50 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Zucker et al PN 3,805,247.

In regards to claims 28, 37, 46, 48: Zucker et al teaches a system (Figure 8) comprising: a plurality of memory resources (memories attached to 76); a plurality of peripheral resources (Devices attached to 76); a plurality of processors (10); a memory controller coupled to said plurality of processors and said plurality of memory resources (80, 84 and 86), wherein said memory controller comprises a first resource controller (80) for controlling access of said plurality of processors to said plurality of memory resources, and wherein said first resource controller is further operable to implement respective buses for coupling said plurality of processors to said plurality of memory resources (84 and 86 are crossbar switches); and a peripheral controller ( 82, 84 and 86) coupled to said plurality of processors and said plurality of peripheral resources, wherein said peripheral controller comprises a second resource controller (82) for controlling access of said plurality of processors to said plurality of peripheral resources, and wherein said first resource controller is further operable to implement respective buses for coupling said plurality of processors to said plurality of peripheral resources (84 and 86 are crossbar switches).

In regards to claims 29, 38: Zucker et al teaches a timer component (Clock 20 and 53) coupled to the controllers to control timing of the controllers.

In regards to claims 30-32, 39-41, 49-50: Zucker teaches simultaneous accessing of different memories and different peripherals (Column 11 line 28-43 and Column 10 line 41 to column 11 line 59)

In regards to claims 33, 42, 47: Zucker teaches a semaphore (Lock Column 12 lines 18-32).

In regards to claims 35, 44: Zucker teaches the priority scheme being round robin (revolving priority Column 8 lines 11-21)

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 34, 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zucker et al PN 3,805,247 in view of Frankeny et al PN 5,949,982.

In regards to claims 34, 43: Zucker teaches the processors communicating through crossbar switches to memories and devices via cross bar switches. Zucker however does not expressly teach the processors being able to communicate with each other. Zucker does teach them both being able to access the lock to determine if the other processor is accessing the desired shared resource. Frankeny et al teaches a plurality of processors communicating to each

other and a plurality of memories and a plurality of I/O devices via a crossbar switch. It would have been obvious to allow the processors to also communicate with each other because this would have allowed for functions such as symmetrical multiprocessing.

5. Claims 36, 45, 51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zucker et al PN 3,805,247.

In regards to claims 36, 45 and 51: Zucker teaches the claimed computer system. Zucker however does not teach the system is portable. Official notice is taken that portable computers are well known. It would have been obvious to a person of ordinary skill in the art at the time of the invention to include Zucker et al's design in a portable computer because this would have made it portable.
